

Boxplot for 5885 workers:

A lot of the 5885 workers did not have any registrations within the 6 months prior to 31st March 2017, even though they had registrations within the 12 months prior to that date. So, when the Earn and Learn scores were generated for these workers on 31st March 2017, the Earn scores for these workers ended up with 0 values. While generating Earn scores, our algorithm looked back upto M=6 months prior to 31st March 2017.

Earn scores for the 0-24 month group and 24-48 month group mostly affected by this as seen in the box plot. The paper shows another boxplot with selected 357 workers who had a few registrations within the 6 months prior to 31st March 2017.
